

Automating Biologics - IChemE Meeting

The subject of the meeting concentrates on High-throughput Development through to Smart Manufacturing. To be held on 22nd February 2016, at IChemE HQ, One Portland Place, London.

Organised by the [Biochemical Engineering Special Interest Group](#) to discuss and learn how automation has the potential to enhance throughput of an organisations' operations through realising greater efficiencies, reduced timeframes and reduce/remove human error.

End-user case studies will be reviewed, demonstrating how automation systems have been used to enhance the development and delivery of biologics.

The focus will be on areas such as:

- cell line and process development
- streamlining the introduction of products into facilities
- enabling emergent cell therapy technologies
- realising the benefits in a manufacturing

Stakeholders looking at research and development of processes and products, suppliers of enabling technology to end-users, or managers seeking to update on the latest trends in the streamlining of the development of the manufacturing biologics are the target of this event.

Broadley-James Ltd will be exhibiting the latest advancements in automated sampling from Flownamics Inc. The patented segmented on-line sampling technology enables sterile connection of multiple analytical instruments to your bioreactor providing "at-line" monitoring and automated control.
